Features/Updates

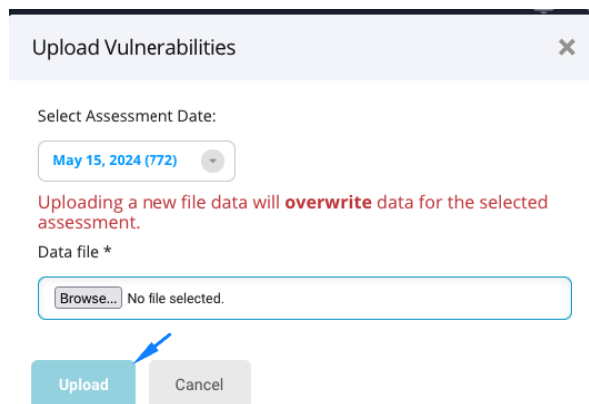

- Implemented a custom scoring system to display individualized custom scores for companies within Portfolios.
- Incorporated and displayed a "New" tag on the Domain's page for recently added or imported domains. The "New" tag is also be available as an option in the Status filter so that you can filter by it.

- Fix to not show Malware findings from threat intelligence that were appearing in the prioritized risk assessment for deleted assets.

Bug Fixes

- Dates for the Last Update field were absent from internal assets, encompassing both internally uploaded data and information sourced from internal agents.
- Implemented email security fixes to ensure accurate data retrieval from MX Toolbox.
- Rectified the top 10 priority threat risks displaying a Spring4Shell.
- Deactivated the upload button when no file is selected.

A screenshot of a web dialog box titled 'Upload Vulnerabilities' with a close button (X) in the top right corner. Inside the dialog, there is a section 'Select Assessment Date:' with a date picker showing 'May 15, 2024 (772)'. Below this is a red warning message: 'Uploading a new file data will **overwrite** data for the selected assessment.' Underneath is a label 'Data file *' followed by a file selection input field that says 'Browse...' and 'No file selected.' At the bottom of the dialog are two buttons: 'Upload' and 'Cancel'. A blue arrow points to the 'Upload' button, which appears to be disabled or inactive.

Other Additions or Issues Fixed

- Angular Issue & Parked Domains fix
- Enhancements to the remediation process: if a rescan fails to detect existing application findings on the asset, the finding is flagged as remediated. This task is handled by an agent.
